

The Cisco Certified Difference

Are you looking for ways to get the most value from your technology budget, maintain and extend the life of your existing network, or meet a critical project delivery schedule? Cisco® Certified Refurbished Equipment is a genuine and trusted complement to new Cisco equipment, with no compromise in performance, quality, support, or value.

- **Peace of Mind from Cisco Certified.** The performance, security, and integrity of your network begins with the integrity of the equipment. Fully remanufactured using ISO 9001/14001 certified processes and proprietary firmware and hardware upgrades, comprehensive testing, and reconditioned to Cisco specifications, our products carry the same full Cisco warranty and support options as new products, and are fully licensed for immediate use. Sold by the same Cisco authorized channels that already provide you with new Cisco equipment, Cisco Certified Refurbished Equipment protects your business, your network, and your peace of mind.
- **Lower Lifecycle Ownership Costs.** The economics of your network over its lifecycle is an important consideration in its design, deployment, operation, and maintenance. Whether your network requirements call for disaster recovery and redundancy capabilities, onsite spares, nonproduction applications such as test labs, or the need to maintain and extend the life of legacy networks, Cisco's extensive inventory of 2800 unique remanufactured products can be used throughout your network to reduce the total cost of the system over its useful life, and protect your technology investment.
- **Increase Budget Flexibility.** With savings of 25 to 70 percent off list prices for new equipment, Cisco Certified Refurbished Equipment gives you more options for working within your budget. By saving on refurbished equipment, you get more technology for the dollars you spend. Projects that are vital, but have traditionally low return on investment, may become viable. When combined with new Cisco products in a project, Cisco Certified Refurbished Equipment helps free up funds to accelerate IT projects that may have previously been deferred or delayed due to resource constraints.

Purchase with Confidence

Certified protection—Genuine Cisco without compromise to performance, quality, support, or value

Extensive inventory of over 2800 different new and end-of-sale products; across all technologies

Financing available through Cisco CapitalSM

Our Commitment to the Environment

At Cisco, environmental responsibility is central to how we do business. We take a comprehensive and integrated approach to minimizing the direct impact of our products and operations on the environment. We develop innovative technologies that enable environmental sustainability, and we employ environmentally responsible processes and practices in the development of these technologies. Finally, we implement responsible recycle, remanufacture, and disposal programs for Cisco equipment when it reaches end of life. Through the Cisco Certified Refurbished Equipment program, decommissioned equipment is fully remanufactured and redeployed within Cisco and to customers desiring quality used products. Since 2001, over 28,000 customers in 80 countries have reduced cost, extended the life of their IT infrastructure and reduced their impact on the environment by using Cisco Certified Refurbished Equipment.
